RISK ASSESSMENT ACTION PLAN

control measures necessary	Agreed actions:	Actionee:	Date Due:	Date Action Completed:

RISK ASSESSMENT GUIDANCE

	Hazard Identification				
When undertaking a risk assessment consider the following hazards (this list is not exhaustive and other hazards may be present					
Acid	Falling / flying objects	Other people			
Adverse weather	Falls from height	Physiological Capabilities (Human Factors)			
Asphyxiation / drowning	Ground collapse / failure	Pressure systems			
Chemicals / harmful substances	Heat / fire / explosion	Psychological Capabilities (Human Factors)			
Confined spaces	High / low temperature	Structural failure			
Contact with moving parts / machinery	Human Behaviour	Underground / overhead services			
Dust / fumes	Inadequate Lighting	Uneven ground			
Electricity	Lone Working	Unsafe access / egress			
Explosion	Machines / objects overturning	Use of power tools			
Failure of lifting equipment	Manual handling	Vehicle movements			
Failure of tools / equipment	Noise	Vibration exposure			

		Pe	rsons at Ri	sk		
All	Members	Young Persons	Contractors	Visitors	Member of Public	

	RA - Form Guidance
(1) Hazard Identification	Put in all the potential hazards associated with the task (Consider hazard list above).
(2) Associated Risk(3) Current Controls	Put in the likely effects i.e. cuts, burns, broken limbs, damage to property.
(3) Current Controls	Put in the existing controls i.e. SWP, procedures, Guards, demarcation, PPE.
(4) Severity of Harm	Estimate the severity (Scale 1 to 5 see severity indicator).
(5) Likelihood of Occurrence	Estimate the likelihood (Scale 1 to 5 see likelihood indicator).
(6) Risk Rating	Multiply the severity of harm score with the likelihood of occurrence score.
(7) Further controls necessary	State if further controls are required to control / reduce the risk. Complete action plan

	Severity			
1	Minor injury no lost time			
2	Minor Lost time Injury under 7 days			
3	Serious lost time injury over 7 days			
4	Major Injury (Specified Major under RIDDOR)			
5	Fatality			

	Likelihood
1	Rare (may occur only in exceptional circumstances)
2	Unlikely (may occur sometime)
3	Possible (should occur at sometime)
4	Likely (event will probably occur in most circumstances)
5	Almost certain (event is expected to occur in most circumstances)

	Risk rating
High 15 to 25	UNACCEPTABLE RISK - Stop the task or do not allow it to start until further controls have been implemented in order to reduce the risk as low as is reasonably practicable (a balance of cost and risk) and ideally to achieve a low risk rating.
Medium 7 to 14	RISK MAY BE UNACCEPTABLE - It may be acceptable to implement temporary control measures to achieve the required level of risk reduction until more permanent measures are in place.
Low 1 to 6	ACCEPTABLE RISK - Task may continue presuming controls are implemented and monitored. Where additional low or no cost control measures can be implemented, particularly where this encourages employee engagement, these should be considered.

	Hierarchy of Control
Eliminate	Get rid of the hazard; replace it with something less hazardous.
Reduce	Reduce the level of risk by reducing the nature of the hazard, e.g. use small quantities, lower voltage etc
I solate	Isolate the hazard from people, for example by guarding
Control	Control exposure to the hazard by controlling who has access or limiting exposure time
P PE	Personnel Protective Equipment
D iscipline	Training and Supervision
